

CSP Documentation Requirements for ABSN Students

You must submit the following documentation:

- Background Check
- Urine Drug Screening
- Handbook Acknowledgement
- Practice Experience Release of Information Authorization Form
- Student Confidentiality Agreement
- Professional Liability Insurance
- Health Insurance
- Provider Statement of Student Health Status (Physical)
- CPR/BLS for Provider Certification from the American Heart Association
- OSHA, HIPAA, Bloodborne Pathogen Assessments
- Immunization Requirements
 - **MMR:** Evidence of a series of two MMR vaccinations (at least 28 days apart) or three positive titers for each of the three components (measles/rubeola, mumps, and rubella).
 - **Hepatitis B:** Evidence of a series of three vaccinations or a positive Hep B surface antibody titer.
 - **Hep B** lab titers are often mis-ordered, so be aware a Hep B surface antibody is required.
 - **Varicella:** Evidence of a series of two Varicella vaccinations or a positive VCZ IgG antibody titer.
 - *Having chicken pox in the past does not count toward having a vaccine or titer as it does not always guarantee immunity; two vaccines or a titer are required, regardless if you have had the disease in the past.*
 - **Td/Tdap:** Evidence of one adult dose of the TDAP within the past 10 years. If a dose of TDAP was obtained after the age of 11, any 10-year renewals of this requirement can be a Td vaccine.
 - **Influenza:** Evidence of a vaccine from the current or most recent flu season.
 - **COVID training including but not limited to:** COVID-19: How to put on and remove personal protective equipment & COVID Vaccination training.
 - **Covid-19 Vaccine:** While CSP does not currently require the Covid-19 vaccine, the School of Nursing strongly encourages this for nursing students. Most clinical settings do require this vaccination so this helps to ensure equal access to quality learning opportunities and clinical learning experiences.

CSP Documentation Requirements for ABSN Students (continued)

• TB Test Requirements

- Strongly preferred: Negative TB blood test (Quantiferon – TB GOLD or TSPOT TB Test) completed within the last year, OR;
- Negative (0-<5mm) two-step purified protein derivative (PPD) completed within the last year.
 - *Please note that a PPD skin test is defined as two (2) separate PPD skin tests that are completed 1-3 weeks apart. This involves getting one PPD placed, having it read a few days later, then, after 1-3 weeks, getting a second PPD placed, then read a few days later.*
- For students with a past positive PPD, a negative chest x-ray (no evidence of active pulmonary disease) is required once. Chest x-rays are only acceptable if taken as a follow up to a previous or current TB skin test. A TB questionnaire must be completed annually and verified by a healthcare provider (form available at the end of the CSP handbook).
- TB test must be completed annually while in the Nursing program via a new blood test or skin test.
 - *If a two-step PPD skin test is complete initially, a one-step skin test (a single PPD skin test that is placed and read) is acceptable for annual renewals. If the initial TB test for the program was a blood test, a two-step PPD would be needed for the renewal, as that would be the first PPD skin test on record.*
